Cryptshare for Notes

Every day your business exchanges a wealth of data with customers, suppliers and partners. A big part of this communication takes place via e-mail. However, often the information is highly confidential or held in files that are simply too big to send via e-mail. What happens then?

There are many different ways to solve this problem. Our advice however is:
Use the tools you already have!

Cryptshare for Notes enables you to exchange sensitive information and attachments of large file size. Via e-mail, directly and convenient from IBM Notes.

Functionality and Advantages

Cryptshare for Notes integrates seamlessly into the user interface of your existing Notes client so employees don't have to install or learn any new complicated software.

Your company, your rules

Every company has to comply with different rules and regulations - and not all functions have to be available to all users. Therefore Cryptshare can be set up to have different options available and either work manually or automatically for certain user groups. There can even be rules that decide when files and e-mails are sent via Cryptshare or via the normal mail-routing.

The user is in focus

By clicking on the Cryptshare toolbar-icon or by using the widget users can also manually start a secure transfer. Since communication is never a one-way street Cryptshare also lets your external partners send e-mails and large files back to your staff. Fully encrypted via the web-interface. No client software installation, exchange of certificates or user account administration needed!

Automation

By defining rules and policies you may decide to encrypt and transfer all attachments from Notes e-mails automatically or only those that meet defined criteria. This way neither sender nor recipient has to do anything and stay in their usual workflow. In addition they will be automatically notified of the actions taken to protect their work.

User centred design - Making e-mail better

We believe that user acceptance is driven by ease of use! Therefore Cryptshare is full of features that will make working with it convenient and productive:

- ✓ Send secure e-mails directly from IBM Notes
- ✓ Exchange large files from IBM Notes
- ✓ Have full control over status of sent e-mails
- ✓ Look up passwords for each transfer
- ✓ and many more...

Simple Administration, more Security, less Cost

Cryptshare's powerful policy engine enables specific risks to data in your organization to be considered and policies for use to be defined centrally from a comprehensive administration console. From a central server inside your DMZ Cryptshare is by default available to all of your email users. You may elect to create different policies for different groups providing legal, administrative and economic advantages. It also lets you comply with data protection guidelines easily. A self-cleaning system without the need for daily user management keeps administrative efforts low and gives your IT time to focus on other pressing tasks. Furthermore using Cryptshare unburdens the company's e-mail system and therefore offers the opportunity to save money and resources on storage and back up. In combination with a simple pricing model return on investment for use is measurable and short.

Administration

- Rule-based processing of messages based on various criteria.
- Central management of policies and options.
- Simple company-wide roll out.
- Connecting of existing Notes applications.
- Powerful policy tools to enforce compliance rules via CS server.

Security

- Encryption of subject line to protect you from social engineering attacks.
- Ad-hoc exchange of encrypted e-mails and files with any external communication partner.
- Transport encryption via TLS and perfect forward secrecy.
- Strong encryption of email and files whilst stored and in transit.

Added Value

- Relieves e-mail server from large file attachments.
- No licence cost for external recipients or senders.
- Acceptance and productivity through familiar Notes working environment.
- Makes compliance and data protection easy.
